NEXT STEP: TURNOVER

## General HERA Feature Checklist

| #  | Feature                             | Delivered capability                                                                                                   | Status      |
|----|-------------------------------------|------------------------------------------------------------------------------------------------------------------------|-------------|
| 1  | Personalized Baseline Learning      | Learns personal patterns across heart rate, activity, sleep, cycle, symptoms, nutrition, and tracked wellness signals. | ✓ Delivered |
| 2  | Personal Physiological Digital Twin | Builds a personal health profile and compares current readings with established personal patterns.                     | ✓ Delivered |
| 3  | Personalized Trend Forecasting      | Reviews historical measures to present direction, stability, and short-term trends.                                    | ✓ Delivered |
| 4  | Prediction Stability Monitor        | Compares current and previous insight sets and communicates prediction consistency.                                    | ✓ Delivered |
| 5  | Symptom–Sensor Discrepancy Detector | Compares reported symptoms with personal wearable and wellness records.                                                | ✓ Delivered |
| 6  | Multi-Parameter Anomaly Detection   | Evaluates multiple health measures and presents unusual signal combinations.                                           | ✓ Delivered |
| 7  | Early Pattern-Deviation Detection   | Compares recent values with personal ranges and highlights meaningful changes.                                         | ✓ Delivered |
| 8  | Pattern Recurrence Detection        | Identifies repeated symptom and wellness patterns across recorded history.                                             | ✓ Delivered |
| 9  | Cycle-Phase Physiological Signature | Presents phase-based patterns using cycle, wearable, sleep, symptom, and wellness history.                             | ✓ Delivered |
| 10 | Cycle-to-Cycle Comparison           | Compares latest cycle length with recent baseline and timing.                                                          | ✓ Delivered |
| 11 | Cycle Pattern Change Detection      | Highlights changes between latest and historical cycle patterns.                                                       | ✓ Delivered |
| 12 | Cycle Prediction Confidence         | Communicates prediction range and confidence from available cycle history.                                             | ✓ Delivered |

| #  | Feature                                       | Delivered capability                                                                                | Status      |
|----|-----------------------------------------------|-----------------------------------------------------------------------------------------------------|-------------|
| 13 | Adaptive Cumulative ALI                       | Calculates daily Activity Load Index from worn-device activity readings.                            | ✓ Delivered |
| 14 | Activity Distribution Tracking                | Shows daily duration across activity and intensity levels.                                          | ✓ Delivered |
| 15 | Personal Activity Baseline                    | Compares daily activity load with rolling personal baseline.                                        | ✓ Delivered |
| 16 | Personalized Recovery Curve                   | Tracks movement back toward personal activity range after higher-load periods.                      | ✓ Delivered |
| 17 | Recovery Pattern Change Detection             | Surfaces changes in recovery behavior across recorded activity history.                             | ✓ Delivered |
| 18 | Food Image Processing & Nutritional Breakdown | Creates editable food, portion, calorie, protein, carbohydrate, and fat estimates from images.      | ✓ Delivered |
| 19 | Portion-Size Estimation                       | Provides confidence-aware estimates with manual correction before saving.                           | ✓ Delivered |
| 20 | Personalized Nutrition Learning               | Uses saved meal records to establish personal nutrition patterns.                                   | ✓ Delivered |
| 21 | Confidence-Aware AI + Explanation             | Shows confidence, supporting records, influencing inputs, and limitations with insights.            | ✓ Delivered |
| 22 | Health Data Quality Detector                  | Checks missing, duplicate, noisy, impossible, and inconsistent records before analysis.             | ✓ Delivered |
| 23 | Sensor-Fusion Intelligence                    | Aligns wearable and user-entered records by date and time for combined analysis.                    | ✓ Delivered |
| 24 | Counterfactual Health Insights                | Runs clearly labeled, non-persisted what-if wellness simulations.                                   | ✓ Delivered |
| 25 | Intervention Effectiveness Tracker            | Compares tracked measures before and after user-recorded interventions.                             | ✓ Delivered |
| 26 | Intervention Recommendation Ranking           | Ranks wellness suggestions when enough outcome evidence exists.                                     | ✓ Delivered |
| 27 | Multimodal Personalized Wellness Timeline     | Combines cycle, check-in, wearable, sleep, nutrition, hydration, insight, and intervention history. | ✓ Delivered |
| 28 | Personalized Healthcare & Clinic Matching     | Matches healthcare need and location with available Region XII care information.                    | ✓ Delivered |
| 29 | Personalized Clinic Profile                   | Displays clinic location, services, specialties, and contact details.                               | ✓ Delivered |
| 30 | Personalized Doctor Profile                   | Displays doctors, specialties, and comparison information.                                          | ✓ Delivered |
| 31 | Specialist Selection & Saving                 | Saves preferred doctor or specialist to authenticated profile.                                      | ✓ Delivered |
| 32 | AI Health Summary Generator                   | Creates editable, reviewable, versioned, and approved summaries from selected HERA records.         | ✓ Delivered |
| 33 | mHealth Specialist Connection                 | Prepares approved summary and available clinic contact action for user-controlled handoff.          | ✓ Delivered |

| #  | Feature                                 | Delivered capability                                                                                                                                                                       | Status      |
|----|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| 34 | Temporal Pattern Analyzer               | Analyzes timing, date ranges, gaps, persistence, and repeated record patterns.                                                                                                             | ✓ Delivered |
| 35 | Cross-Parameter Relationship Mapper     | Shows supported relationships between wearable, sleep, activity, hydration, nutrition, cycle, and wellness measures.                                                                       | ✓ Delivered |
| 36 | Sleep-Activity Interaction Analyzer     | Compares sleep records with activity and Activity Load Index.                                                                                                                              | ✓ Delivered |
| 37 | Nutrition-Physiology Association Engine | Compares nutrition records with related sleep, activity, heart-rate, and cycle measures.                                                                                                   | ✓ Delivered |
| 38 | Hydration Pattern Analysis              | Shows daily hydration history, personal ranges, and changes over time.                                                                                                                     | ✓ Delivered |
| 39 | Rest-Day Balance Tracking               | Compares lower-load and higher-load days with rolling activity baseline.                                                                                                                   | ✓ Delivered |
| 40 | Wellness Goal Progress Tracking         | Tracks goals, targets, progress history, status, and outcomes.                                                                                                                             | ✓ Delivered |
| 41 | Multi-Account User Profiles             | Provides separate authenticated accounts, profiles, sessions, device ownership, and account-scoped records.                                                                                | ✓ Delivered |
| 42 | Interactive Healthcare Location Map     | Presents supported healthcare facilities on an interactive map with selectable locations and detailed clinic information, including services, specialties, addresses, and contact options. | ✓ Delivered |
| 43 | HERA Video Showcase Integration         | Provides a responsive homepage media area designed for a YouTube-hosted HERA introduction, product walkthrough, or client presentation video.                                              | ✓ Delivered |

## Sleep Monitoring Checklist

| # | Feature                  | Delivered capability                                                                                  | Status      |
|---|--------------------------|-------------------------------------------------------------------------------------------------------|-------------|
| 1 | Sleep Quality            | Validated 1–5 input with preserved check-in history.                                                  | ✓ Delivered |
| 2 | Morning Restedness       | Validated 1–5 input, storage, API, and interface.                                                     | ✓ Delivered |
| 3 | Sleep-Onset Difficulty   | Validated 1–5 input, storage, API, and interface.                                                     | ✓ Delivered |
| 4 | Nighttime Awakenings     | Validated count input, storage, API, and interface.                                                   | ✓ Delivered |
| 5 | Sleep Disturbances       | Validated 1–5 input, storage, API, and interface.                                                     | ✓ Delivered |
| 6 | Morning Sleepiness       | Validated 1–5 input, storage, API, and interface.                                                     | ✓ Delivered |
| 7 | Sleep Schedule           | Bedtime, estimated sleep time, wake time, consistency, and overnight validation.                      | ✓ Delivered |
| 8 | Sleep Wellness Score     | Deterministic score, minimum-data handling, history, and safety wording.                              | ✓ Delivered |
| 9 | Sleep Pattern Assessment | AI-assisted assessment with bounded records, confidence, record count, and non-diagnostic disclaimer. | ✓ Delivered |

### Final Step — Project Turnover

Implementation work is complete for client presentation. Remaining activity is formal project turnover, including source-code handoff, deployment credentials and environment configuration, database and account handoff, documentation delivery, client orientation, and acceptance confirmation.

HERA provides informational wellness support only. It does not diagnose, treat, predict fertility, assess emergencies, or replace qualified healthcare professionals.
